

Vitoge

Whitepaper

Vite Network

Vite uses a Directed Acyclic Graph (DAG) ledger structure, which is a low latency and highly scalable network.

The DAG ledger and asynchronous communication scheme play a big role in achieving high performance. In general, Vite's asynchronous design lies in three areas:

- Asynchronous Design of Request and Response
- Asynchronous Design of Transaction Writing and Confirmation
- Asynchronous Design of Cross-Contract Calls

Built-in smart contracts are widely used in Vite. Features like SBP registration, voting, staking, token issuance, and ViteX exchange, are implemented in built-in smart contracts.

SBP (Snapshot Block Producer) is responsible for producing snapshot blocks and securing consensus on the Vite chain. SBP rewards are issued to incentivize the SBP nodes. There are 25 SBP nodes in Vite Mainnet.

The consensus algorithm of Vite is called Hierarchical Delegated Proof of Stake (HDPoS).

HDPoS is a multi-tiered algorithm featured by different levels of consensus groups.

The eventual consensus in HDPoS is secured by supernodes of Snapshot Consensus Group, while nodes in Delegated Consensus Group and Private Consensus Group are responsible for reaching consensus for transactions of smart contracts and user accounts.

Who are Vitoge Core Team ?

Three VITE enthusiasts from the early stage who are passionate by crypto since 2017.

All convinced that DAG technology is a game changer in cryptoworld (NANO, FTM, COTI, BAN, VITE, etc), we'd like to create the first DAG meme coin driven by the community, for the community.

Tokenomics

Total supply : 420,000,000,000,000

All \$Vitoge have been issued from the very beginning. No more than this amount will be released. This means no inflation !

Presale

Total supply : 42,000,000,000,000

Presale funds will be allocated to Vitoge SBP.

Core team will add the remaining VITE needed with their own funds to set up VITOGESBP.

Distribution

Public Distribution

Pre-sale allocation

33% of the public allocation will be used for public pre-sale at a discounted price of (0.0000000025\$ / VITOGEx) catching 105k\$ hard capitalization.

Airdrops & Giveaways

10% of the public allocation will be distributed through airdrops, giveaways. This will take place on social medias such as Twitter and Discord.

Active VITOGEx community members will be rewarded.

SBP VITOGEx

After VITOGEx listing on ViteX, VITOGEx SBP will be added. 17% of the public allocation will be allocated to this SBP Vote rewards.

Staking

40% of the public allocation will be used as staking rewards through VITOGExpool app.

Details of the staking rewards will be communcated later on.

Team Distribution

Core Team

30% of the team allocation will be distributed to the core team after listing on Vitex for the VITOGЕ/VITE trading pair.

These allocations will be time-locked over the time.

Monthly payments

55% of the team allocation will be distributed via monthly to the team members and all contributors for VITOGЕ developments

Bonus

15% of the team allocation are specifically reserved for special events/milestones.

When a bonus will be released, communication to the VITOGЕ community will be done on social media.

DAO Distribution

Market Making

35% of the DAO allocation will be used for Market Making on new exchanges.

VITOG Ecosystem

15% of the DAO allocation will be used for the growth and development of VITOG ecosystem.

Community wishes

50% of the DAO allocation will be used to put in place proposal coming from the VITOG community after deliberations.

Tokens Burn

- Monthly tokens burn to maintain a competitive value of VITOG token
- Massive tokens burn for big milestones

Be ready for the next VITOG burn !!

Roadmap

(CAN EVOLVE TIME TO TIME)

Q4 2021

Q1 2022

Q2 2022

Q3 2022

Q4 2022

- Social Media accounts
- Airdrops
- Website
- Whitepaper
- Presale
- ViteX listing
- SBP VITOGEx

- Tokens burn
- CEX/DEX listing
- SBP VITOGEx with VITOGEx rewards
- VITOGEx staking app
- DAO Vote app

- CEX/DEX listing
- NFTs
- VITOGExswap presentation
- Incentive Dev funds

- Buy back and tokens burn
- AMM DEX deployment
- Yield farming
- Metaverse

- DAG partnerships
- Continuous development
